

Geotechnical FAC Conference Call

December 12, 2002, 10:00 CST

Participants:

Glenn Kato, TAC
Jean McGinn, HQ
Paul Madison, MVP
Bill Rochford, LRC
Bruce Rogers NAP

The FY03 GT Database Project got pushed back to FY04.

Actions:

Jean McGinn will Contact ERDC to get a copy of the 1998 Geotech Database Project results.

Glenn will check SDS Standards for GT structure.

Glenn will send a message out for information on existing database structure fields, and short description and automated log data input Software in use.

The group will meet at the Infrastructure Conference in May, and do a small marketing presentation at our meeting. Hopefully bringing out some other requirements. And form a GT Database Users Group. There will also be a GT Database presentation from Korea. Glenn needs to verify with Nancy Blyler on GTFAC participation.

The group feels a Standard Database Structure with front end for input is required. If we can work out some of the details we may be able to solicit a select number of districts to fund portions of the project prior to FY04.

The majority of the discussion involved the usage of the GT Database. The downside is Mobile's application is primarily MicroStation and does not do analysis.

Bruce Rogers will send out a Dbase structure used with AutoCAD

Next meeting we may want to compare typical test data information

Glenn Kato
