

Systems FAC Meeting
20 June 2000

1. There were some problems with getting through on the conference call line today so the meeting was short with few attendees.
2. John Kincaid recently sent out a listing of all the mdl's being converted to J by Bentley as well as a copy of the mdl's themselves. Please take a look at these and forward any comments to John.
3. Rock Island District is currently working on a project with ESRI to bring ArcInfo converages into Microstation using SDE. For more information on the project contact John Kincaid (JOHN.A.KINCAID@USACE.ARMY.MIL).
4. The latest version of the Workspace File Manager can be downloaded from the Corps web site at <ftp.usace.army.mil>. The files are located under incoming\mvr\file manager.
5. The scope of the proposed Boring Log project includes the ability to read in several different types of data sets and plot boring logs for construction drawings. There will be no attempt to do analysis on the data as there are several commercial products on the market already that will do that. If anybody else has project proposals for SAC funding, please send your proposals to John Kincaid at the above e-mail address soon.
6. Another "face to face meeting" is being scheduled for July 26-27, 2000 in Seattle. Please e-mail John Kincaid your availability for that time and whether or not you will need funding from the SAC in order to attend.
7. Next Call: Tuesday, July 18, 2000, 10:00 CST, (404) 562-4365
